# Easus Todo Backup Free 9.2 Basic Backup Tutorial

One of the simplest to use whole computer backup programs for Windows available. And for basic use, it is completely free. You can download it here: http://www.todo-backup.com/products/home/download.htm . When you install, and you wish to use the free version, just install the regular version but, don't put in the licence key. Of course the full version is very inexpensive, so you may wish to just buy it. This tutorial assumes that the program has already been installed on your PC.

<- 1. Click further until you find the place that you wish to store your computer backup

2. Then click OK to Accept ->

e)

System Name	Location	Size
Windows 7 Service Pack 1	C:\ *:\	223.57GB

1. Type in the name of the backup so that you can find it easily, I like to incorporate todays date.

2. (Optional) Type in a description. This is only really usefull if you are doing lots of backups.

Only the current system can be backed up.

Destination: E: 922.89 GB Free of 931.51 G

Plan name: wcr backup 06 09 16   Description: warragulcomputerrepair.com.au backup

Schedule: Off   Backup options   Image-reserve strategy

3. Click proceed to continue ->   Proceed   Cancel

f)

wcr backup 06 09 16
Please wait, backing up...
Estimated time remaining 00:23:35

Operation   Cancel

g)

wcr backup 06 09 16
Location: E:\wcr backup 06 09 16
Task completed
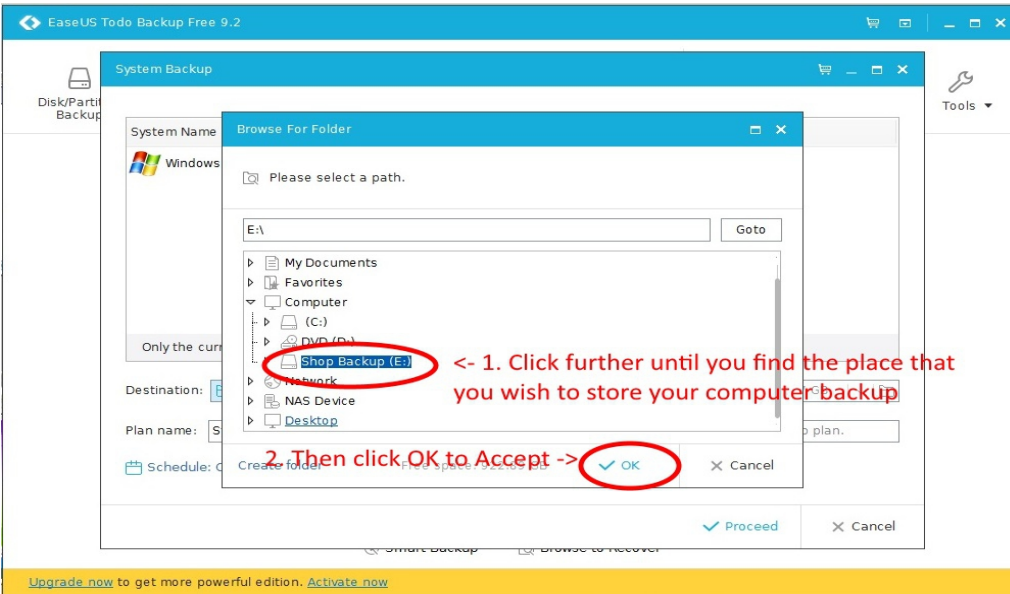

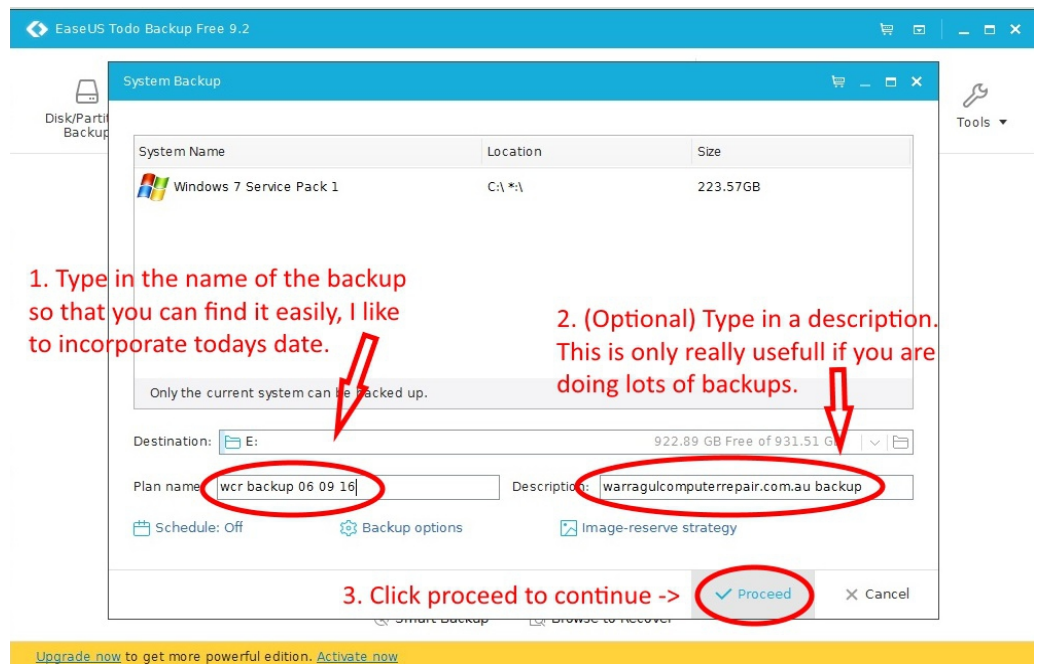

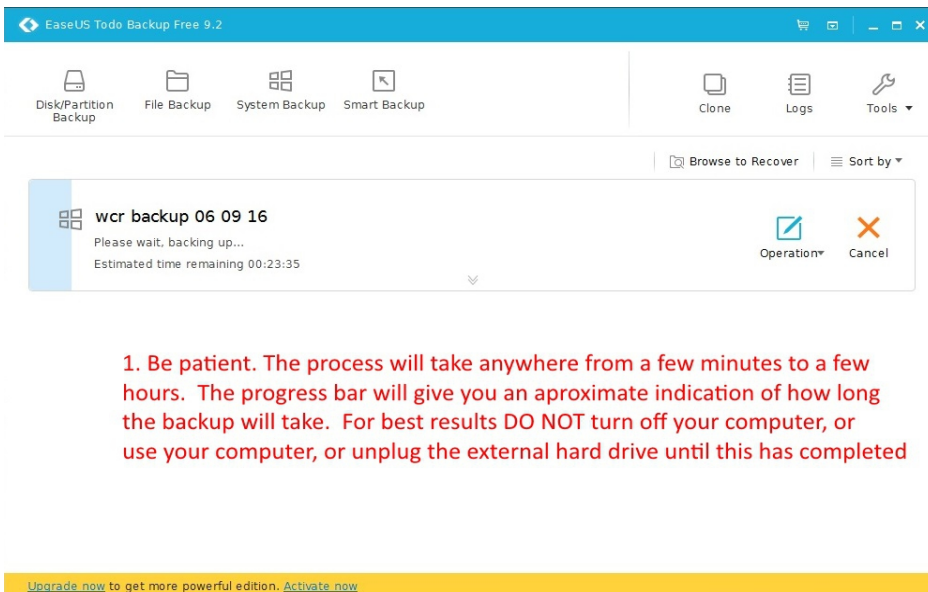

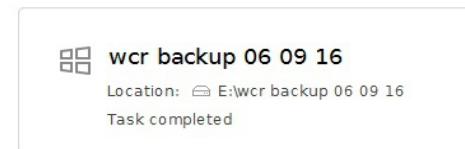

1. Be patient. The process will take anywhere from a few minutes to a few hours. The progress bar will give you an aproximate indication of how long the backup will take. For best results DO NOT turn off your computer, or use your computer, or unplug the external hard drive until this has completed

h) When you are done. UNPLUG the external HDD and put in a place that is nowhere near the original. Remember, a backup is only a backup if it is in a different spot to your original. We suggest for regular backups to rotate 2 HDD's just in case.
